

W4111 – Project Part 3

1. Both members' name and UNI

Shimen Feng sf2911 - Mert Ketenci mk4139

For logging into the application please use:

Username = sfeng

Password = 123

2. The URL to access your application

url from GCP external IP: <http://35.233.138.142:8111>

3. link to the GitHub repo containing your codebase

https://github.com/shimengfeng/Database_Project1

4. The changes we made on Part-3:

1. We have updated the users entity:

At the begining of the project we have defined the users table which has only 3 attributes. Those were age, u_id and address. We enhanced this table as a user generally has more attributes than 3 and using u_id was not the best practice. Thus, we added:

(a) firstname: first name of the user

(b) lastname: last name of the user

(c) e-mail : e-mail of the user, is now our new primary key.

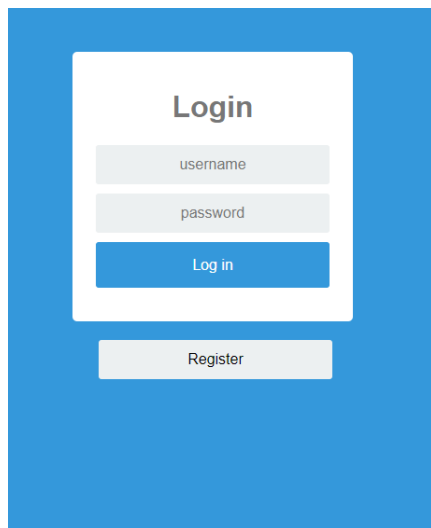

(d) u_id : is still there and unique.

(e) password: is the password user uses while logging in.

(f) username: Is the unique name user uses while logging in. It was not a good practice to make user enter his/her u_id while logging in. That is why we created username.

A general summary for the web-page:

1) Log-in page:

A login form mockup with a blue background. It features a white box containing the title "Login", a "username" input field, a "password" input field, a blue "Log in" button, and a "Register" button located below the white box.

Login

Log in

Register

A user can enter to this page by entering his/her username and password.

2) Register page:

A "Sign Up" form mockup. It starts with the title "Sign Up" and a subtitle "Please fill in this form to create an account." followed by ten input fields: "First Name", "Last Name", "Email", "User Name", "Address", "Age", "Password", "Repeat Password", a "Remember me" checkbox, and a "Terms & Privacy" link. At the bottom are "Cancel" and "Sign Up" buttons.

Move-In!: Move-Out!: [Submit](#) Country: [Search](#)

Categories By Property

13 Results Found!

[superCondo](#)

For 100\$

[Clean & quiet apt home by the park](#)

In the main page you will see the houses in database. You can query them according to the availability dates and location. The server is going to connect to SQL and find the suitable houses for a given date and for a given location. If no location is entered the query will run only according to date. If an invalid location is entered the query will result with 0 entries. If no location is entered the query is going to find all of the houses. Locations are countries such as United States, Turkey, etc... Click the link will direct user to the details of each housing post. These are data we queries from our database.

Billing Address	Payment	Billing
 Full Name <input type="text" value="John M. Doe"/>	Accepted Cards   	
 Email <input type="text" value="john@example.com"/>	Name on Card <input type="text" value="John More Doe"/>	Number of Rooms: 2
 Address <input type="text" value="542 W. 15th Street"/>	Credit card number <input type="text" value="1111-2222-3333-4444"/>	Check in: 2019-01-17
 City <input type="text" value="New York"/>	Exp Month <input type="text" value="September"/>	Check out: 2019-11-17
		Number of days: 304
		Price: 100
		Total: 60800 \$

The total payment amount is calculated by rooms*(move-out – move-in). This is currently the last page of this website. In the future, once we gather the payment information and authorize it with the users' bank, we could update our book and listing table within database.

7) User Profile:

User Profile

user information

first_name: Mert
last_name: Ketenci
age: 19
address: New York

This is a page for a user to see his/her user details. Data are pulled from user table in database.

7) Chat-Room (future work):

We wanted to establish a page where users can chat. The current functionality allows users to post chat and will be updated upon click the button. However, in the future, a real-time chat will be helpful.

Shimeng:my friend and I will be staying here for

Shimeng:we will be touring lower manhattan, d

Shimeng:that sounds great, do you have parking

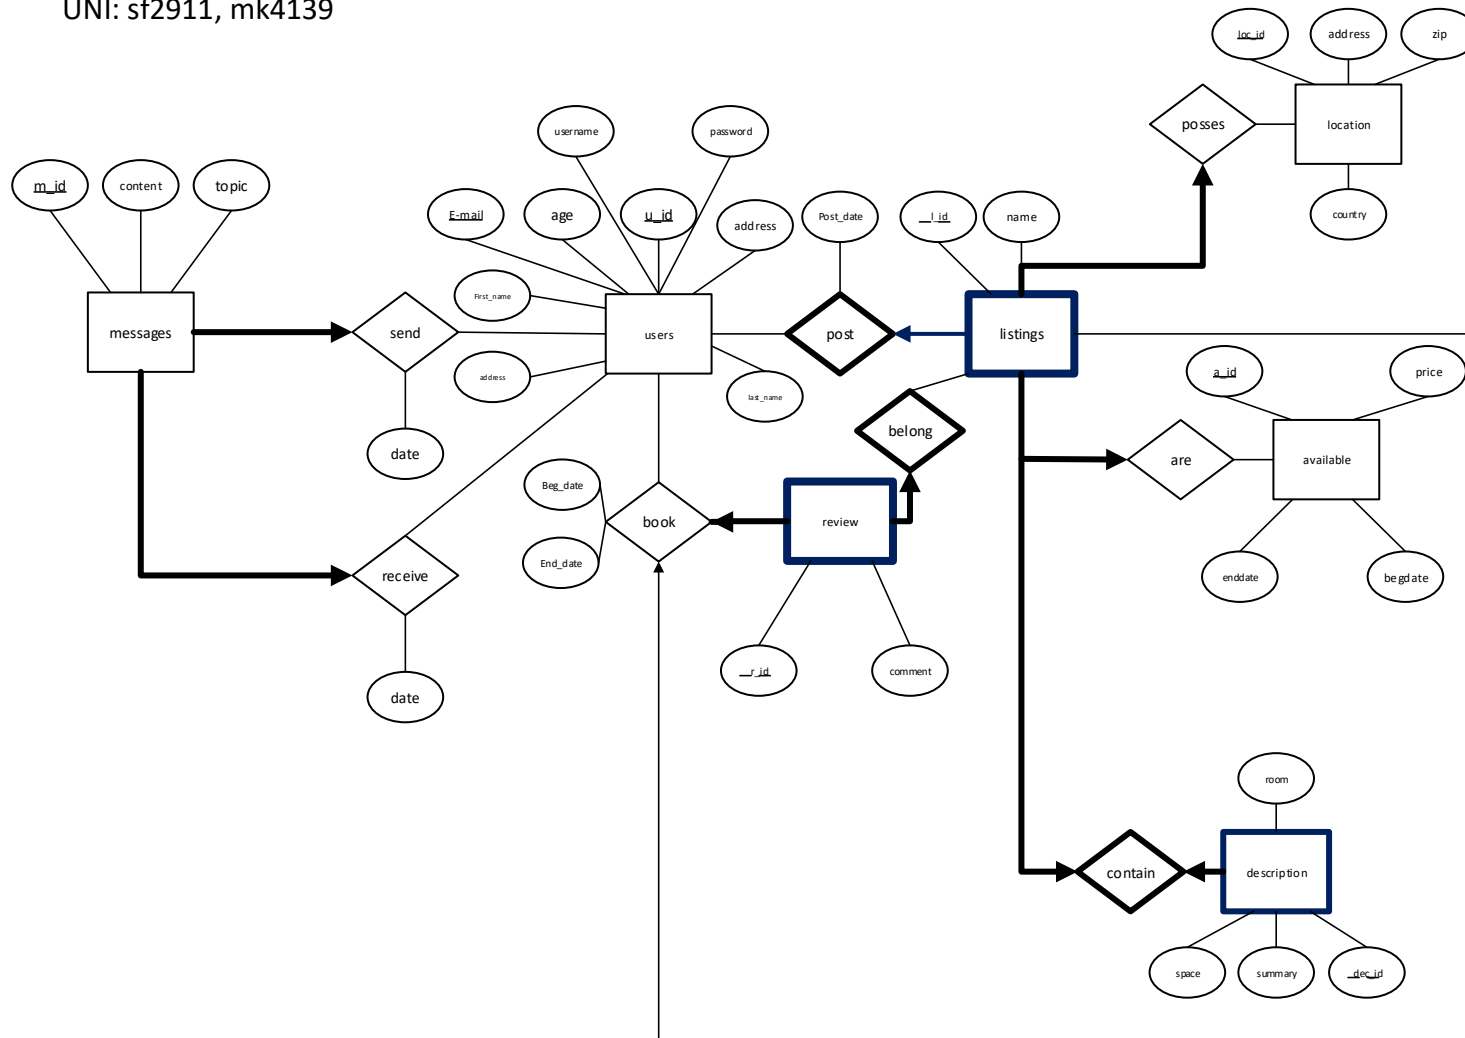

Shimeng:That is really helpful! Thank you and

Shimeng:You have to turn on the heating button

Shimeng:Yes, thank you!

[Review this house!](#)

UNI: sf2911, mk4139

1. Description is a weak entity of listings since once a listing is deleted, the corresponding description of the housing will be removed.

2. Each listing contains exactly one description, poses at exactly one location, and have exactly one availability posted
3. A user can post listings and book exactly one of the listings
4. Listings are weak entities of users since once a user deactivates their account the corresponding listing will be removed
5. Users can post listings, and send and receive messages from other users.
6. Each review is a weak entity of users as well as listings. Either user or listing is removed, the corresponding review is removed.
7. Message is sent by exactly one user and received by exactly one user.
8. A user can post review to a listing he/she booked.
9. Each listing can be booked at most once (can exist without a demand)
